

## CAGE EGGS

Can't you just taste the cruelty?

Next time you look to save a few cents by buying cage eggs, consider this, battery hens are forced to live on sloping wire cages about the size of an A4 sheet of paper.

Their beaks are sliced off with a red-hot blade to stop them attacking each other.

What's more, constant egg laying and lack of exercise means that they develop osteoporosis, causing their legs to become deformed and snap like twigs.

Now ask yourself, is it really worth it?

Still hungry for cage eggs?
